Used Parts for Forklift

Used Forklift Parts - Sooner or later, lift truck components would wear and must be replaced. Purchasing new parts can become a pricey venture so one more idea is to acquire used forklift parts. This could save a lot of money in the long run. It is a great idea to buy used lift truck parts that have been remanufactured. These components would guarantee that you are getting parts which will work for a long time and be productive.

Broken or worn parts which are remanufactured are a cheaper answer compared to rebuilding. With rebuilding components, only the components that are worn out or broken get changed, which means that other wearable parts might break down soon after acquisition.

Remanufacturing however offers the best guarantee for second-hand components. Remanufactured parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable parts are replaced regardless of age or wear which is one more reason why remanufactured parts in general run so much better. Any component within the part is new and this offers far longer life to the used part. Depending on the lift truck parts that are being redone, the cleaning process and the entire remanufacturing process would vary.

After complete disassembly, the engines are oven cleaned. Different components of the engine such as pistons, spark plugs, rings, valve springs, filters, and valves could be replaced during the remanufacture process. The engines are hot tested after reassembly to ensure that there are no leaks, no noises, no oil pressure problems or any vacuum.

Transmissions are oven cleaned, pressure washed, and disassembled. A comprehensive examination is done to check for any cracks. Seals, bearings and bushings are all replaced. Typically, the replacement components used on transmission parts meet OEM specifications.

A few lift truck components like the water pump, torque converters, the alternator, the starter and steer axles could be quite serviceable after worn components are replaced. The electronic control in the electric lift truck is maintained by the control card. This particular card can even be reproduced with replacing all aged and worn out components. Not like various lift truck components the control card can only have the worn and aged components replaced.

Components that are reproduced have to be meticulously checked upon reassembly to ensure they are in good condition before being sold. When purchasing these parts, it is a good idea to be certain that they have undergone all of the proper testing and inspections. On certain larger parts like for instance transmissions, steer axles and engines, OEM specification replacement parts should be used.

The dealer of used lift trucks and parts could guarantee that the remanufactured parts have met OEM specifications and that these parts meet industry standards. Many details go into remanufacturing second-hand parts. This attention to detail provides more serviceability out of remanufactured components compared to the parts that were simply rebuilt.
